

# Toledo-Lucas County Health Department Seasonal Influenza Activity Summary

MMWR Week 6 February 4-10, 2018

## Local Surveillance:

### Current Influenza Activity Levels:

Lucas County had **50** confirmed Influenza-associated Hospitalizations (IAH) reported in week 6, bringing the total to **447** cases as of February 10, 2018. *91% of cases were flu type A, 76 were H3 strain-the majority were not subtyped.*

--Zero deaths reported in Week 6

*Gender Distribution of Cases: 56% female, 45% male*

Lucas County accounts for 4% of the IAH reported in Ohio. Rate per 100,000 population<sup>\*\*</sup>: 97.33

<sup>\*</sup>Stating Influenza as the cause of death OR as 'a consequence of' on the certificate of death. Please note that some individuals may have underlying health conditions and influenza may not be the sole cause of their death.

<sup>\*\*</sup>Disease rates were calculated by number of cases per 100,000 residents using 2010 census data

Graph 1 illustrates the current confirmed IAH compared to baseline, which is a five year average.

High	Mod	Low	Minimal
------	-----	-----	---------

\* Combination of ED visit data and Influenza-associated Hospitalizations.

ED Visits are comprised of Influenza-like illness and respiratory syndrome as compared to the baseline average

# Toledo-Lucas County Health Department Seasonal Influenza Activity Summary

MMWR Week 6 February 4-10, 2018

The number of emergency department visits with patients exhibiting fever/ILI symptoms was well above baseline for MMWR 6. ILI (Influenza-Like Illness) is defined as a fever greater than or equal to 100 degrees F AND a cough or sore throat. (Graph 3)

**Summary of State Data:** Current Ohio Activity Level (Geographic Spread) – Widespread  
 Definition: Increased ILI in at least half of the regions AND recent (within the past 3 weeks) lab confirmed influenza in the state.  
 During MMWR Week 6, public health surveillance data sources indicate elevated influenza-like illness (ILI) activity in outpatient settings reported by Ohio’s sentinel ILINet providers. Outpatient medical claims related to influenza-like

# Toledo-Lucas County Health Department Seasonal Influenza Activity Summary

## MMWR Week 6 February 4-10, 2018

illness decreased slightly during MMWR Week 6. The percentage of emergency department visits with patients exhibiting constitutional symptoms and fever and ILI specified ED visits decreased. Reported cases of influenza-associated hospitalizations are above the seasonal threshold\*. There were 1098 influenza-associated hospitalizations reported.

### **State Surveillance:**

- ODH lab has reported 920 influenza tests from specimens sent from various submitters. 2017-2018 influenza season positive results: (623) A/H3N2; (74) A/pdmH1N1; (71) Influenza B; (through 02/10/2018).
- The National Respiratory and Enteric Virus Surveillance System (NREVSS) has reported 47,646 influenza tests performed at participating facilities. 2017-2018 influenza season positive results: (63) H1N1, (345) A/H3N2, (7609) Flu A Not Subtyped, and (1245) Flu B (through 02/10/2018).
- 3 pediatric influenza-associated mortalities have been reported during the 2017-2018 season (through 02/10/2018).
- No novel influenza A virus infections have been reported during the 2017-2018 season (through 02/10/2018).
- Incidence of confirmed influenza-associated hospitalizations in 2017-2018 season = 10,785\* (through 02/10/2018).

**Regional Surveillance\*:** During week 5 (January 28th – February 3rd, 2018), the proportion of outpatient visits for ILI in Region 5 (Ohio is in Region 5) was 5.96%, which is above the regional baseline of 1.8%. Michigan, West Virginia, Pennsylvania, Ohio, Indiana, and Kentucky reported Widespread Activity.

**National Surveillance\*:** During week 5 (January 28th – February 3rd, 2018), most U.S. states reported Moderate or High influenza activity, though a few are still reporting Low or Minimal activity. The proportion of outpatient visits for ILI was 7.7%, which is above the national baseline of 2.2%. All 10 regions reported ILI at or above their region-specific baseline level. The most frequently identified influenza virus type reported by public health laboratories was influenza A (H3N2).

\*Regional and National surveillance data are reported one week later than Ohio state and local data
