

Toledo-Lucas County Health Department Seasonal Influenza Activity Summary

MMWR Week 4 January 22-28, 2017

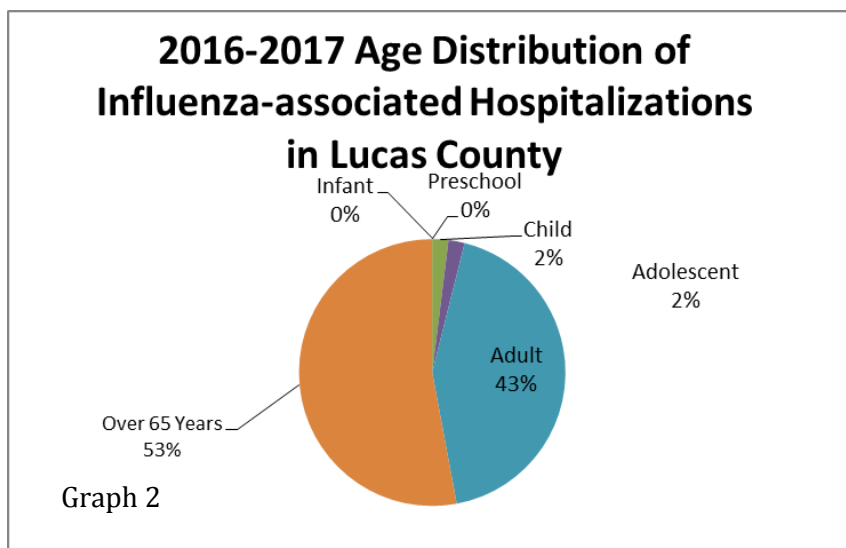

Local Surveillance:

Current Influenza Activity Levels:

- Lucas County had **12** confirmed Influenza-associated Hospitalizations (IAH) reported, bringing the total to **50** as of January 28, 2017.
- *Gender Distribution of Cases:* 57% female, 43% male

Lucas County accounts for 2.7% of the IAH reported in Ohio.

Graph 1 illustrates the current confirmed Influenza-Associated Hospitalizations compared to baseline, which is a five year average.

Infant: 0-2 years old
Preschool: 3-5 years old
Child: 6-12 years old

Adolescent: 13-17 years old
Adult: 18-64 years old
65 years and older

Toledo-Lucas County Health Department Seasonal Influenza Activity Summary

MMWR Week 4 January 22-28, 2017

The number of emergency department visits with patients exhibiting fever/ILI symptoms was slightly above baseline for MMWR 4. ILI (Influenza-Like Illness) is defined as a fever greater than or equal to 100 degrees F AND a cough or sore throat. (Graph 3)

Summary of State Data: *Current Ohio Activity Level (Geographic Spread) – Widespread*
Definition: Increased ILI in at least half of the regions AND recent (within the past 3 weeks) lab confirmed influenza in the state.

During MMWR Week 4, Ohio public health surveillance data sources indicate increasing activity for influenza-like illness (ILI) in outpatient settings reported by Athenahealth medical claims data and by Ohio's Sentinel Influenza Surveillance Providers. The percentage of emergency department (ED) visits with patients exhibiting constitutional symptoms and fever and ILI specified ED visits increased. Weekly Influenza-associated hospitalization numbers have been above the *seasonal threshold for several weeks; there were 395 influenza-associated hospitalizations reported.

State Surveillance:

- ODH lab has reported 351 influenza tests from specimens sent from various submitters. 2016-2017 influenza season positive results: (2) A/pdmH1N1; (212) A/H3N2; (19) Influenza B; (through 01/28/2017).
- The National Respiratory and Enteric Virus Surveillance System (NREVSS) has reported 25,629 influenza tests performed at participating facilities. 2016-2017 influenza season positive results: (2) H1N1, (171) A/H3N2, (1115) Flu A Not Subtyped, and (189) Flu B (through 01/28/2017).
- 0 pediatric influenza-associated mortalities have been reported during the 2016-2017 season (through 01/28/2017).
- No novel influenza A virus infections have been reported during the 2016-2017 season (through 01/28/2017).

Toledo-Lucas County Health Department Seasonal Influenza Activity Summary

MMWR Week 4 January 22-28, 2017

- Incidence of confirmed influenza-associated hospitalizations in 2016-2017 season = 1679 (through 01/28/2017).

Regional Surveillance*: During week 3 (January 15th – January 21th, 2017), the proportion of outpatient visits for ILI in Region 5 (Ohio is in Region 5) was 2.6%, which is above the regional baseline of 1.9%. Indiana reported Local Activity; Michigan and West Virginia reported Regional Activity; Ohio, Kentucky, and Pennsylvania reported Widespread Activity.

National Surveillance*: During week 3 (January 15th – January 21th, 2017), 13 U.S. states reported Minimal influenza activity, 17 states reported Low Activity, 10 reported moderate activity, and 10 reported High activity. The proportion of outpatient visits for ILI was 3.4%, which is above the national baseline of 2.2%. All 10 HHS regions reported ILI levels at their region-specific baseline level. The most frequently identified influenza virus type reported by public health laboratories was influenza A (H3N2).

*Regional and National surveillance data are reported one week later than Ohio state and local data

Flu Information:

Influenza Virus Characterization:

CDC has antigenically characterized 298 influenza viruses [37 influenza A (H1N1)pdm09, 201 influenza A (H3N2), and 60 influenza B viruses] collected by U.S. laboratories since October 1, 2016. 98% of the Influenza B viruses that have been antigenically characterized by CDC were similar to viruses included in either the trivalent or quadrivalent 2016-17 influenza vaccine. 96% of the influenza A viruses characterized matched the viruses included in the 2016-17 influenza vaccine.

State, Regional and National data is provided by the Ohio Department of Health
